

## Bug Fixes

**ID :** 1609**Fixed in version :** 1.1.0**Short Description:** Control remains disabled in paged pane**Full Description:** I have bought en payed your jsSignature and I have a question.

I enclose a very simple J lbs that explains my question.

When you start it up and in the \$constuct you go directly to PagePane 8, You can use the signature

```
Do method initServer
Calculate ins_PagedPane2 as 8
Do $inst.$redraw(kTrue,kTrue)
Quit method
```

But when you go first to PagePane 6 and then to PagePane 8 by clicking on the button 'Activiteiten' then it won't work anymore. It seems deactivated.

```
Do method initServer
Calculate ins_PagedPane2 as 6 ;; BRAINYDATA:
Do $inst.$redraw(kTrue,kTrue)
Quit method
```

To get to this momentum, I have disassemble the application part by part. Do you have any idea?

Hope to hear from you soon, because we have demo's next week and I use now a workaround, but that won't last long.

**Comments :** When the signature control was constructed invisible, the inner canvas area failed to initialise correctly.

## Enhancements

**ID :** 1615

**Implemented in version :** 1.1.0.0

**Short Description:** JS Signature and transparency

**Full Description:** We would like to be able to produce signature images with transparent background.

**Comments :** We have added support for handling of transparency. Setting the property \$backalpha to 0, will now produce a PNG image with a transparent background.

**ID :** 1617

**Implemented in version :** 1.1.0.0

**Short Description:** JS Signature trimming

**Full Description:** JS Signature now trims the signature image to the actual area occupied by the signature strokes when the new property \$trimsignature is set to kTrue.
