

## Bug Fixes

**ID :** 1631**Fixed in version :** 2.1.1**Short Description:** Crash & other issues when importing example library from JSON**Full Description:** We have resolved some of the issues we found when exporting and importing classes with OCal controls. However, one issue remains.

OCal overrides the build-in property \$vertscroll. This currently does not work correctly during export or import of JSON. We have fixed the exported example source manually on github, but until this issue is resolved, after importing the JSON, the OCal objects on the window wGroupView require manual fixing. For all but the last OCal object on this window, the \$vertscroll property should be set to kFalse. We have reported this issue to Omnis Software and they are investigating.

You should experience no issues if your library does not set \$vertscroll to kFalse in design mode.
