

How to store merged data in an OWrite document

Once an OWrite document has been evaluated by calculating \$evalcalcs to kTrue, it is possible to save the document with the merged data. Simply specify kTrue for the third parameter of \$savedata. This will permanently alter the document by replacing the embedded calculations with the result data. Data can be merged when saving to any of the formats supported by \$savedata.

```
;; save the data with the document  
Do ivEdit.$savedata(theFilePath,kWriFmtDefault,kTrue)
```

Note: Only the document data returned by \$savedata is altered. The document in the OWrite buffer remains unaltered.
